

ARFF 8-3-11: Tunnel Pick-ups & Redirects: Each tunnel exit present multiple options to your dog. Your job is to pick him up in a timely fashion so that you can successfully redirect him to the chosen obstacle. Since this course includes a straight tunnel, you'll be doing some running.

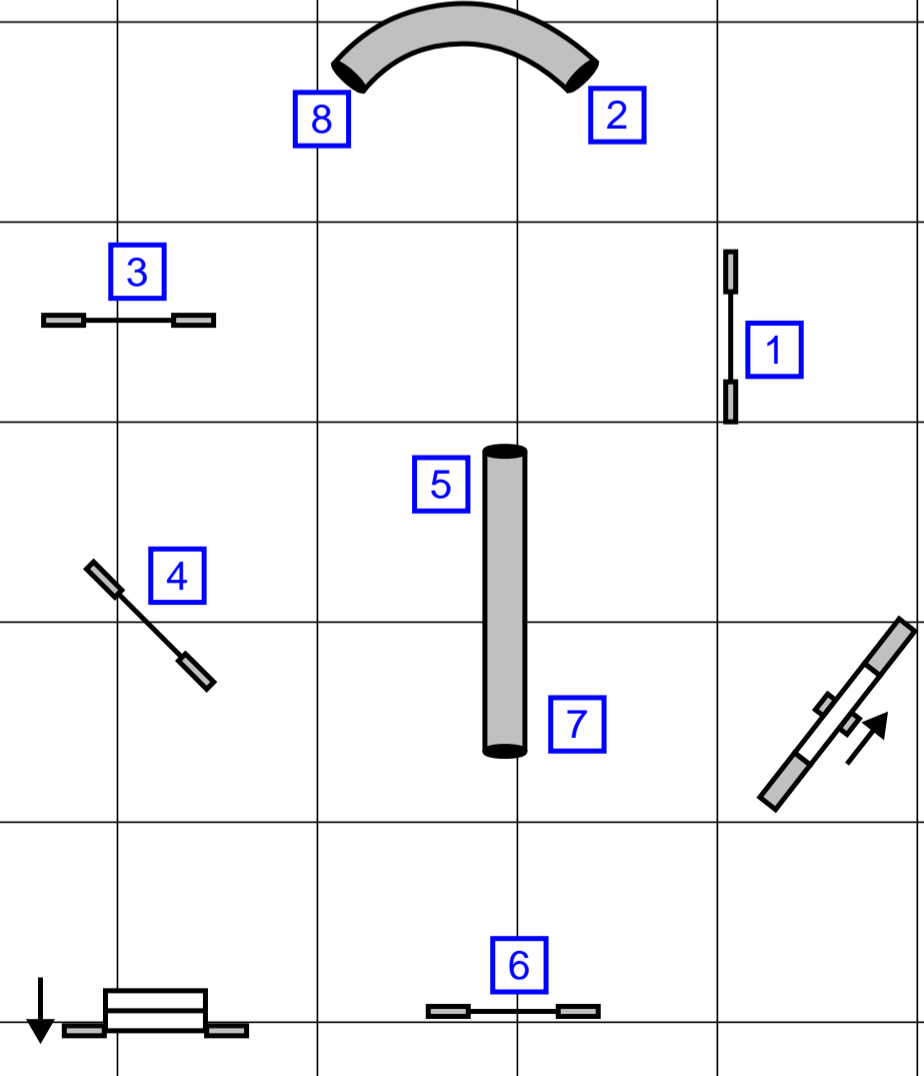

This is a pretty simple loop-de-loop. Then try it omitting the #3 tunnel. Can you call your dog off the enticing curved tunnel?

The straight tunnel is separating the two sides of this exercise. Here you'll have to redirect your dog away from the curved tunnel into the #4 straight tunnel, but then you have to turn him toward the teeter. Can you send him to #3 and call him back through the straight tunnel so you'll be in position to get him on the teeter? Watch your dog's angle to the #7 tunnel entry: the other end is more inviting.

Try to stay as close to X for #1-#4 so you can call your dog to the teeter as he exits the straight tunnel. #6-#7 present your dog with the challenge of bypassing the tunnel he's just zipped through a bunch of times. Keep moving in the right direction!

Your dog will build up speed through #4. You'll have to pull him off the triple and redirect to the straight tunnel. Be ready to wrap the #6 jump to stuff him back in the tunnel.
